Add-On Course Topic: 'Concept of Innate Idea'

- **Course Co-Ordinator:** Mr. Satap Halder, Assistant Professor & Mr. Anup Kr. Sardar, SACT, Department of Philosophy,
Jibantala Rokeya Mahavidyalaya.

About Innate Idea: Rationalism is a philosophical view that regards reason as the chief source and test of knowledge. It asserts that a class of truths exists that the intellect can grasp directly, and that reality has an inherently logical structure. Rationalism has a philosophical history dating from antiquity and is often contrasted with empiricism. Rationalism takes mathematics to be fundamentally a matter of pure thought, establishing absolute truths by sheer reasoning. This perspective led to the development of various mathematical principles and the belief that the universe operates according to precise mathematical principles. Continental rationalism refers to a set of views shared by philosophers active in Europe during the 17th and 18th centuries, including René Descartes, Baruch Spinoza, and Gottfried Wilhelm Leibniz. These philosophers emphasized the importance of reason, intuition, and innate ideas over sensation and experience.

- **Objectives of the course:** To develop students' knowledge about Rationalism. To introduce students to the views of various philosophers on rationalism ideas and to explore whether rationalism ideas have a real existence in everyday life.
- **Number of Participants:** 15
